
Git Bash Commands - II

1. Viewing File Content

Command	What it Does
<code>cat filename</code>	Displays the contents of a file in the terminal.

2. Writing Text to a File Using echo

Command	What it Does
<code>echo "text-content" > filename</code>	Writes text to a file. If the file does not exist, it will be created.
<code>echo "text" >> filename</code>	Appends text to an existing file without deleting previous content.

3. Writing Text Using cat

Command	What it Does
<code>cat > filename</code>	Creates a file and allows us to type text directly in the terminal.
Steps: <code>cat > file.txt</code> Type your text here Press Ctrl + D to save and exit	
<code>cat >> filename</code>	Adds text to an existing file without deleting previous content.
Steps: <code>cat >> file.txt</code> Type additional text Press Ctrl + D to save	

4. Copy Content from One File to Another

Command	What it Does
<code>cat file1.txt > file2.txt</code>	Copies the content of file1.txt into file2.txt.

5. Editing a File Using Nano Editor

Command	What it Does
<code>nano file.txt</code>	Opens the Nano text editor to create or edit a file.
Opens Steps in Nano Editor: <code>Save the file</code> <code>Ctrl + O</code> <code>Exit the editor</code> <code>Ctrl + X</code>
